

Work from Anywhere

Evolution Anywhere is a radical software solution that allows you to remotely harness the full functionality of Sage 200 Evolution, either on-premise or in the cloud.

This Microsoft SQL server solution allows Sage 200 Evolution workstations to remotely connect in a seamless manner to a SQL server database through any internet connection.

Your Sage 200 Evolution Cloud Solution

- Evolution Anywhere is simply installed on the SQL server and workstations running Sage 200 Evolution that is required to connect to the SQL database
- All data exchanged between server, controller and client are encrypted using SSL
- Evolution Anywhere overcomes the restrictions of having a SQL database and application software on the same network
- The tool does not use any terminal services and all applications run on the local PC, so there are no hassles remote printing, importing or exporting of data and no RDP monitoring is required
- All you need is an internet link to your SQL database to be able to work in Sage 200 Evolution's advanced operating environment, capture critical business data and perform key business functions

SEAMLESS INTEGRATION

*into any network
environment*

PLUG AND PLAY

*requiring no additional
customization*

EASY IMPLEMENTATION

*limited IT knowledge
is required*
